## Pin Functions

Unit (resistance:  $\Omega$ )

Pin No.	Symbol	Pin voltage	Equivalent circuit	Pin function
4	$V_S$	$\leq V_{CC2}$		Power supply input that determines the output amplitude. It must be set to a voltage equal or lower than $V_{CC2}$ .
5	$V_{CC2}$	4 to 10 V		Power supply for power amplifier systems other than motor drive transistors. Power supply pin that provides voltage for blocks other than control blocks supplied by $V_{CC1}$ .
6	$V_{CC1}$	4 to 6 V		Power supply that provides voltage for the Hall amplifier, the forward/reverse circuit, the FG amplifier, and the thermal shutdown circuit.
7	ST. BY	(H): 2.0 V max (L): 0.8 V min (When $V_{CC1}$ is 5 V)		All circuits can be made inoperative either by connecting this pin to GND, or by leaving it open. In that state the supply current will be approximately 0 $\mu$ A. Hold at 2 V or higher during normal operation.
8	ANGLE			Connect a resistor between this pin and GND. Changing the value of this resistor will change the Hall input-output gain (motor waveform slope).
10 11	$FG_{IN}^-$ $FG_{IN}^+$	0 V min 3.5 V max (When $V_{CC1}$ is 5 V)		FG signal input pin
12	$FG_{OUT1}$			FG amplifier output pin
