

- 5 Comparators to Digitize Analog Input Signals in 200 mV Increments
- High Input Impedance . . . 100 k Ω Typ
- Open-Collector Outputs Capable of Sinking up to 40 mA and Withstanding up to 18 V
- Supply Voltage Range of 10 to 18 V
- Economical 8-Pin Dual-in-Line Plastic Package

FUNCTION TABLE

INPUT A (NOM)	OUTPUTS				
	Q1	Q2	Q3	Q4	Q5
0— \approx 200 mV	H	H	H	H	H
\approx 200— \approx 400 mV	L	H	H	H	H
\approx 400— \approx 600 mV	L	L	H	H	H
\approx 600— \approx 800 mV	L	L	L	H	H
\approx 800— \approx 1000 mV	L	L	L	L	H
$>$ \approx 1000 mV	L	L	L	L	L

H = high level, L = low level

P DUAL-IN-LINE PACKAGE (TOP VIEW)

description

The TL489C consists of five comparators and a reference voltage network to detect the level of an analog input signal at the A input. Output Q1 is switched to a low logic level at a typical input voltage of 200 millivolts. After each 200-millivolt step, the next output is switched to low logic levels. All outputs are at low logic levels at a typical input voltage of 1000 millivolts. The open-collector outputs are capable of sinking currents up to 40 milliamperes and may be operated at voltages up to 18 volts. The analog input has a high impedance of typically 100 kilohms.

6

Since all five trigger points have a switching hysteresis of typically 10 millivolts, the circuit may be operated with slow input signals without the danger of oscillation at the outputs. To prevent pickup of noise, a capacitor should be connected between the high-impedance input and ground, especially when the input is driven from a high-impedance source.

The TL489C is especially designed to detect and indicate analog signal levels. The device may be used in various industrial, consumer, or automotive applications such as low-precision meters, warning signal indicators, A/D converters, feedback regulators, pulse shapers, delay elements, and automatic range switching. The power outputs are suitable for driving a variety of display elements such as LED's or filament lamps. The outputs may also drive digital integrated logic such as TTL, CMOS, or other high-level logic.

The TL489C is characterized for operation from 0°C to 70°C.

TYPE TL489C

5-STEP ANALOG LEVEL DETECTOR

absolute maximum ratings

Supply voltage, V_{CC} (see Note 1)	20 V
Voltage at analog input A	8 V
Off-state output voltage	20 V
Current through analog input A	-10 mA
Low-level output current (each output)	80 mA
Total low-level output current	200 mA
Continuous total dissipation at (or below) 25°C free-air temperature (see Note 2)	1000 mW
Operating free-air temperature range	0°C to 70°C
Lead temperature 1/16 inch (1,6 mm) from case for 10 seconds	260°C

- NOTES: 1. Voltage values are with respect to network ground terminal.
 2. Derate linearly to 640 mW at 70°C free-air temperature at the rate of 8.0 mW/°C.

recommended operating conditions

	MIN	NOM	MAX	UNIT
Supply voltage, V_{CC}	10	12	18	V
Output voltage, V_O			18	V
Low-level output current			40	mA
Operating free-air temperature, T_A	0		70	°C

electrical characteristics over recommended range of V_{CC} and operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP [†]	MAX	UNIT	
V_{T+}	Positive-going threshold voltage at input A	Switching Q1	$T_A = 25^\circ\text{C}$	160	200	240	mV
		Switching Q2		350	400	450	
		Switching Q3		540	600	660	
		Switching Q4		730	800	870	
		Switching Q5		920	1000	1080	
$V_{T+} - V_{T-}$	Input hysteresis			10		mV	
I_{OH}	High-level output current	$V_{OH} = 18\text{ V}$		0.5	20	μA	
V_{OL}	Low-level output voltage	$I_{OL} = 16\text{ mA}$		0.15		V	
		$I_{OL} = 40\text{ mA}$		0.25	0.5		
I_I	Input current	$V_I = 1\text{ V}$		0.5		μA	
I_{CC}	Supply current	All outputs high	$V_{CC} = 12\text{ V}$	8	12	mA	
		All outputs low		All outputs open	15		25

[†]All typical values are at $V_{CC} = 12\text{ V}$, $T_A = 25^\circ\text{C}$.

TYPE TL489C 5-STEP ANALOG LEVEL DETECTOR

TYPICAL APPLICATIONS DATA

† Keep-alive resistors to avoid high switching current.

FIGURE 1—INTERFACING WITH INCANDESCENT LAMPS

Lamps L1 through L5 illuminate as the input voltage increases in nominally 200-mV steps. Additionally, lamp L1 will flash periodically when the input voltage at point P is below 200 mV.

FIGURE 2—LEVEL INDICATION WITH FLASHING FEATURE

Lamp L1 is turned on at input voltages (pin 8) ≥ 200 mV and the alarm turns off. Lamp L2 is turned on at input voltages ≥ 600 mV to indicate correct operation. Lamp L3 is turned on at input voltages ≥ 1000 mV and the over-range alarm turns on.
