

NE544 Servo Amplifier

Product Specification

DESCRIPTION

The NE544 is a servo amplifier and pulse-width demodulator with internal motor drive transistors. It is designed for remote control applications in digital proportional systems but can be used in many other closed-loop position control applications. It incorporates a linear one-shot for improved positional accuracy and outputs for external PNP motor drive transistors.

FEATURES

- 500mA load current capability
- Bidirectional bridge output with single power supply
- Low standby power drain
- Adjustable deadband and trigger thresholds
- High linearity, 0.5% maximum error
- Output drive for external PNP transistors (optional)
- Wide supply voltage range

APPLICATIONS

- Miniature position servo
- Robotics
- Control devices
- Remote positioning
